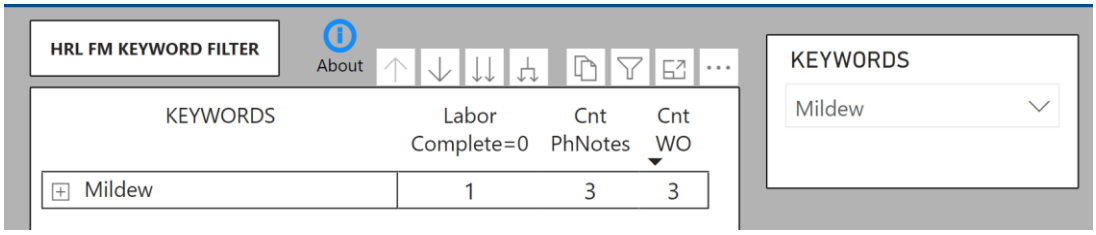
KEYWORD FILTER REPORT GUIDE

The **KEYWORD FILTER REPORT** filters and shows the total amount of Work Order’s based on a list of keywords (current keyword list here) and sorts them by highest amount of work orders with a match. The filter is not perfect and allows other non-related text to be included. For example, AC also returns to FACP.

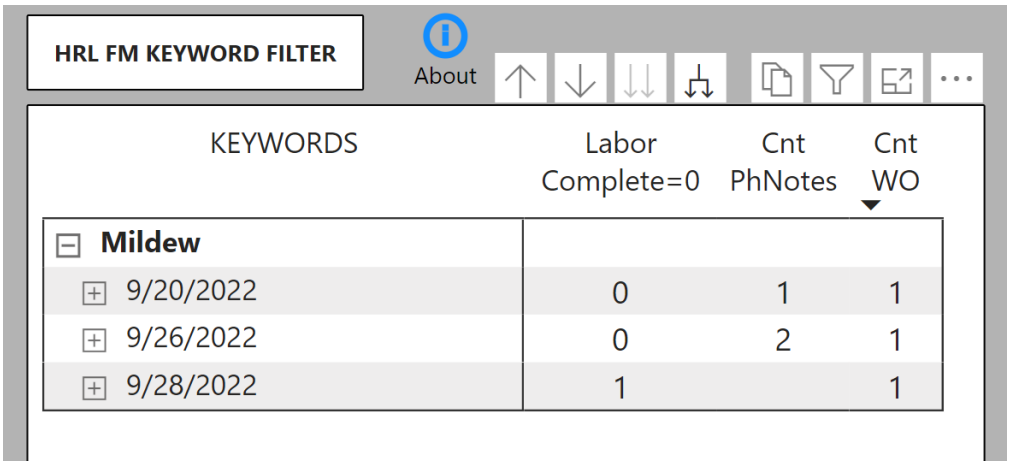
Additionally, counts of phase notes (if created) are counted per work order along with labor complete as shown in the example below:

Selecting “Mildew” from the Keyword dropdown filters 3 work orders. Of those 3 work orders, one can glean that only two work orders are labor complete.

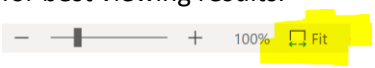
(NOTE: by default, only OPEN work orders are filtered)



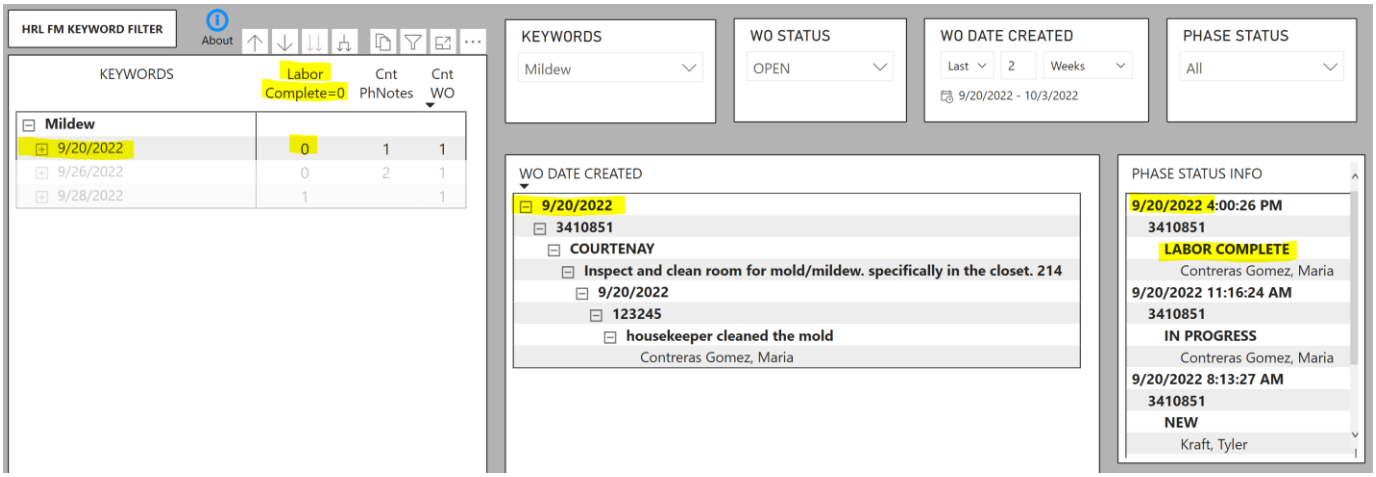
Use to expand downward to view a breakout by date. Two labor completes, one work order with two phase notes and one work order is either In Progress, On Hold or Cancelled.



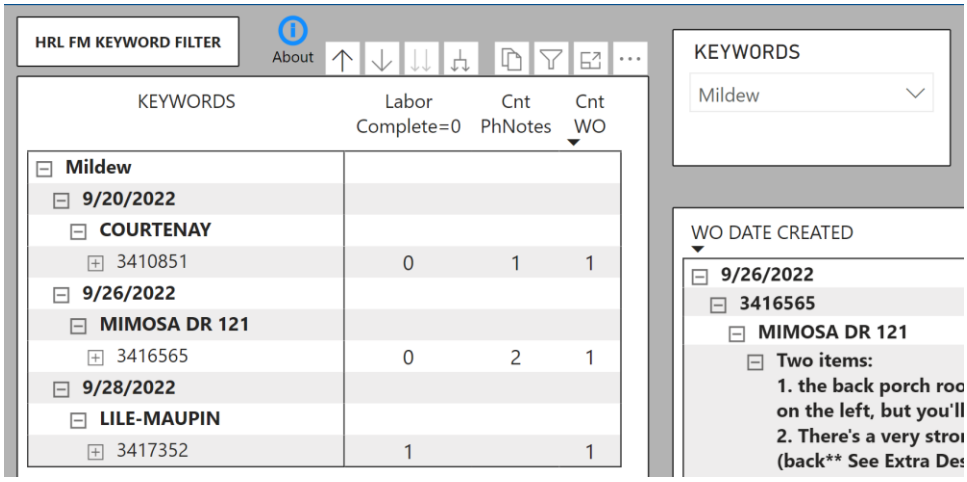
Select “Fit” in lower right corner
for best viewing results.



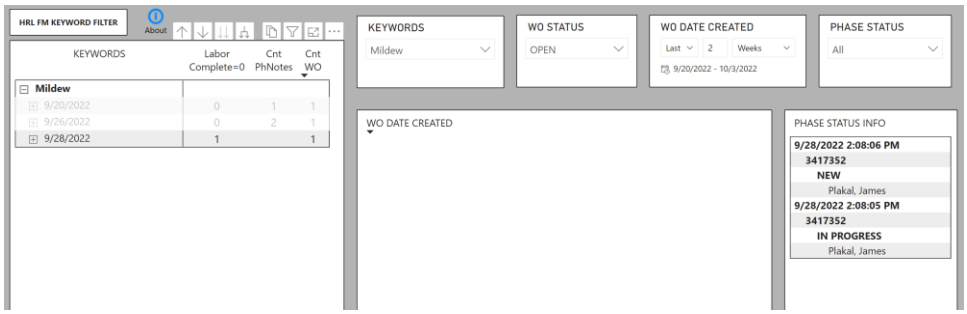
Clicking the date will filter all the related information in the one work order counted. Additionally, since a phase note was added to the completed work order, it shows up in the center table with the person who added the note. Phase Status Info shows the progression of work and editor name.



Example of expanding downward as seen below.



Example of selecting a work order with a blank phase note. Phase Status Info shows In Progress.



Select “Fit” in lower right corner for best viewing results.
