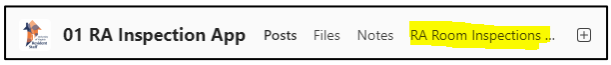
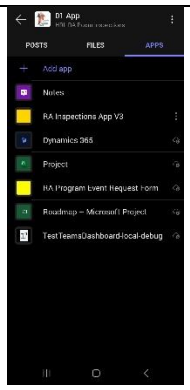
	TEAMS Desktop view of Tabs	**TEAMS Mobile view of Tabs**



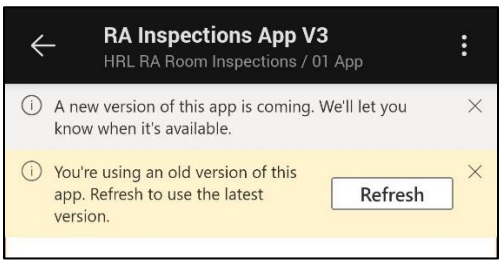


Once inside Teams, there are two ways to open the app. On the General Channel (default) and in the Posts area I have added a post with a quick link that will open the app.

NOTE: Testing will require every 'combination type' listed on the pages below.

Make sure that the most recent version of Teams has been installed.

- For desktop: Use the "New Teams" which may need to be downloaded.
- For Mobile: If the teams app is already installed, try updating the app. If there are still issues with login, remove teams, and reinstall.
- Refresh Notice: you may see a note saying a newer version is available; always select the refresh option to get the latest updates.



RA's testing the app and making a test submission.

1. Use your floor assignments and rooms for testing.
2. Try the combinations of test scenarios listed below.
3. The specific bed is identified using the student's initial shown next to the bed name.
4. Take care of writing notes and photos taken in rooms with multiple beds, noting which student is being referenced.

NOTE: All beds NOT considered satisfactory will ***<u>require a single photo</u>*** and a detailed note.

<u>ONLY ONE PHOTO PER SUMMISSION</u>

If one of the 3 selectable conditions are not applicable but bedroom is not satisfactory, then add those details in the note along with a picture.

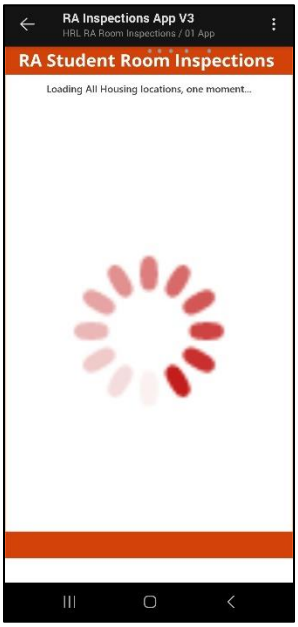
TEST STEPS IDEAS

- The selected bedroom is satisfactory. Submit.
- The selected room has two beds; there is trash everywhere. Who is responsible?
- The selected room has two beds, one person is checking out, and personal items are in the room.
- The selected room has two beds, 2 checking out, trash is in the room.
- The selected room has one bed, and a desk is damaged.
- The selected room has two beds, the wall is damaged, who is responsible.

LOADING ALL LOCATIONS ON START UP OF APP

When the app is first opened, you will see the load spinner image.

The app retrieves 6,000 rows of the most recent changes from the StarRez database. It can take 8 to 10 seconds to finish and is the slowest part of the app experience.

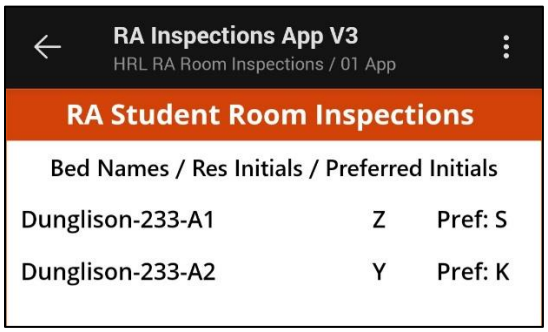


TEST All NAVIGATION:

1. Load app.
2. Select an AREA
3. Select Building
4. Select Floor

5. If the building includes a SUITE, a ‘choice screen’ will appear. (see below)

6. If the inspection is for a SUITE only, then select that choice.
7. After selecting a choice: suite, or room, follow the menu until the form opens.
8. NOTE: if Rooms is selected the following pages follow:
    a. Suite/Room page
    b. Rooms page
    c. Bed page.
9. The example bed page below shows the bed names (A1 & A2), and the Resident Initials & Preferred Initials which help the RA identify the specific resident bed assignment.

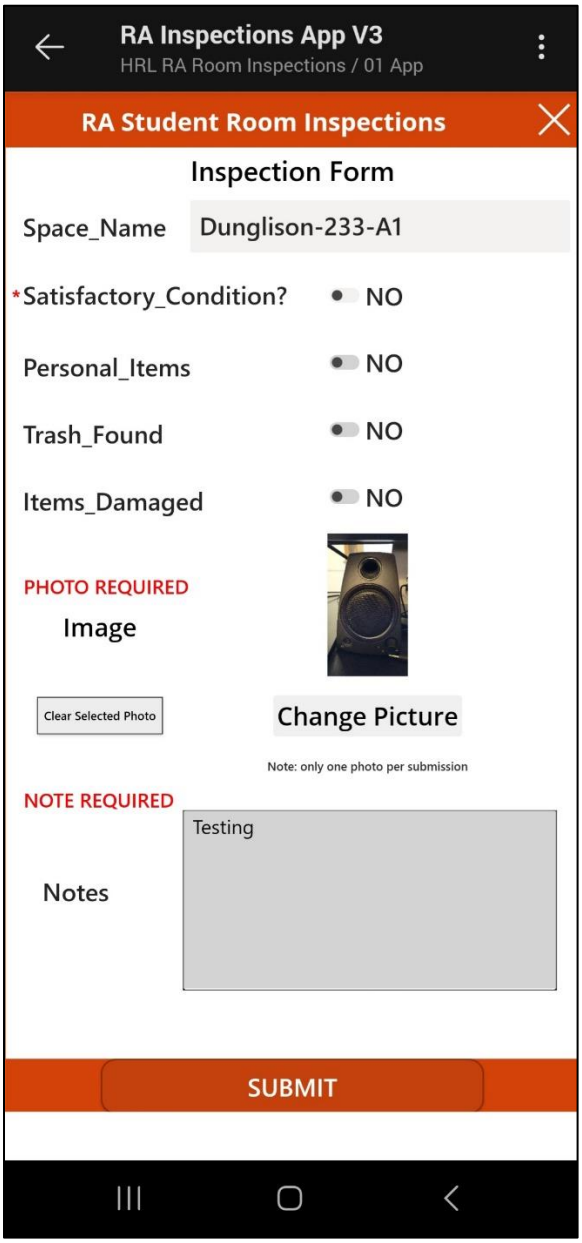


Once a bed is selected, the bed is carried to the Form page.

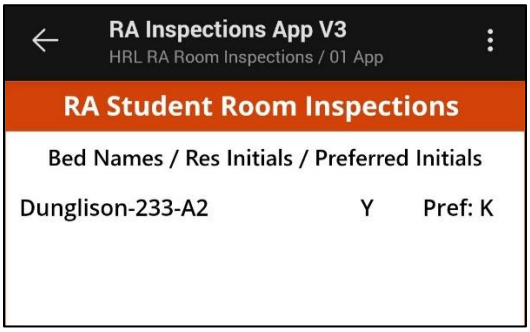
FORM PAGE:

The Satisfactory Condition default is YES but below the switch has been set to NO. The NO setting disables the Submit button until a photo and note has been added.

Notice that the 3 condition issues have not been selected because they don't cover the condition issue. A detailed note & photo will help facilities figure out how to handle.



AFTER RECORD SUBMISION

After record is submitted, the user has the choice to either start a new inspection and return to the most recent room, return to the most recent floor or completely exit the app. (The Exit button will completely log-off users of Office 365)


Note: if or when the user returns to the most recent room, the A1 bed that was previously submitted will not appear; only A2 bed is left.
